#### **Pre-Maintenance**

# Usage/Calendar based maintenance (UBM/CBM)

NC	TE! Refer to the PETtrace Service Manual - Maintenance (direction 2169049-100) for detailed instructions, apply LOTO and use PPE.
System II	NE209962

Maintenance performed in accordance with instructions as outlined in the PETtrace Service Manual - Maintenance (direction 2169049-100) (signature (typed and signed)):

#### **MAINTENANCE TRACKING TOOI**

#### Test of vacuum tightness on PSS

Plot vacuum pressure as function of gas flow from 1sccm to 10 sccm. Vacuum pressure vs gas pressure should be a linear relationship.

Gas flow setting: 5,0 +/- 1 sccm

Gas flow	Chamber vacuum pressure (mbar)	Backing pressure	Max Chamber pressure (mbar)	Max Backing pressure (mbar)
1	0	0	3,60E-06	1,30E-02
2	0	0	6,10E-06	2,10E-02
3	0	0	8,90E-06	2,70E-02
4	0	0	1,10E-05	3,30E-02
5	0	0	1,30E-05	3,90E-02
6	0	0	1,50E-05	4,50E-02
7	0	0	1,60E-05	4,70E-02
8	0	0	1,80E-05	5,40E-02
9	0	0	2,00E-05	5,90E-02
10	0	0	2,20E-05	6,50E-02
OK value	Too low value			

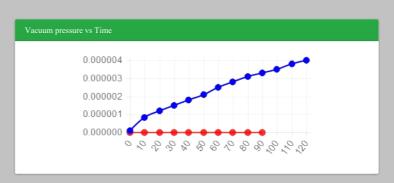

Pass critera: Linear relationship between vacuum pressure and gas flow. (Blue line should be below red line)

Vacuum leak test performed on PSS With the vacuum system operating in pump mode with all BEV closed and without gas flow.

Set Vacuum system on VCU to Standby and observe the leak rate into the cavity (using pressure as proxy)

Time from Set Standby (sec)	Vacuum pressure (mbar)	Max leak rate
0	0	1,80E-07
10	0	1,00E-06
20	0	1,50E-06
30	0	1,90E-06
40	0	2,30E-06
50	0	2,70E-06
60	0	3,00E-06
70	0	3,30E-06
80	0	3,60E-06
90	0	3,90E-06
100	0	4,20E-06
110	0	4,60E-06
120	0	4,90E-06

**Pass critera:** Time to reach 1.0E-5 mbar > 10 s (Blue line should be below red line)

Vacuum	Switch on the water cooling to the diffusion pump							
	Press STANDBY on the VCU, record time							
	Standby time							
	Actual standby start time: 10:27							
	• Verify that the green DP-lamp on the VCU lights up within 30min, re-adjust DP temp-switch as required							
	DP-lamp activation time							
	DP -lamp activated in (min): 0 Max 30min							
	Press PUMP on the VCU and note the following values:							
	Pumping down							

Time before HVV opening	11	10-15 min	
Actual time for HVV opening:	0	<30s	
Actual time to reach 1.0*E-5	0		
• After reaching the vacuum value of 1.0*E-5 open the IS gas flow at 10sccm	for 15	minutes	

Vacuum	WARNING! Diffusion pump may be very warm, verify that at least 2hrs has passed since pump shutdown.							
	WARNING! Rotary and/or diffusion pump oil may be radioactive, verify activity level by performing an activity survey!							
	NOTE! Verify that all cables are free from interference with the diffusion pump, interference may cause cable melting and/or electrical							
	shortcut							
	• Verify the oil level and the color of the rotary pump oil, re-fill or change as required, record re-filled or changed volume							
	Rotary pump oil level							
	Date of the last replacement of oil: 2022-11-07							
	Volume filled/changed (ml): 0							
	Maintenance of the diffusion pump: to be performed every 5 years							
	Last maintenance of the diffusion pump							
	Ventilate the diffusion pump by removing Pirani 1							
	NOTE! Verify that the water cooling is shut off before disconnection of the diffusion pump							
	• Remove the diffusion pump and drain the oil							
	NOTE! Measure the lenght of the Jet assy before it is disassembled. The lenght is critical to pump performance.							
	• Disassemble and clean the diffusion pump							
	• Replace the heater							
	Reassemble, reinstall and fill the diffusion pump with new oil							
	Diffusion pump oil replacement							
	Volume filled/changed (ml): 0							
	• Verify the condition of the rotary pump oil mist filter, clean, inspect or replace as required							
	• Verify the condition of the rotary pump oil mist filter O-ring, clean, inspect for damage and/or deformation, replace as required							
	• Verify the functionality of the pirani gauges and the penning gauge, clean, inspect or replace as required

## MAINTENANCE TRACKING TOOL

## RFPG

RFPG	WARNING! High voltage (up to +7800V DC).
	• Switch off the power to the RFPG
	• Open the TAU and verify that the grounding device is operational (completely in contact with the RF tube). Verify that no burn marks, loose cables or leaking water are present, clean, repair and/or replace as required, close the TAU
	• Open the GSPU and verify that no burn marks or loose cables are present, clean, repair and/or replace as required, close the GSPU
	• Open the DPA and verify that no burn marks, loose cables or leaking water are present, clean, repair and/or replace as required, close the DPA
	• Replace the RFPG air inlet filters, clean the front grid cover, inspect the grid of the back of the cabinet, clean if required
	WARNING! High voltage (up to +7800V DC). It is important to discharge components before removal of rectifier diode/s.
	• Open the TPSU, verify TPSU diode status (48 diodes), diode bridge should read 0,8-0,9V forward voltage drop from negative (-) pin to positive (+) pin A defective diode bridge will read close to/or 0V, repair and/or replace as required
	• Verify tightness of the TPSU terminal screws TBL 1, TBL 2, TBL 3, tighten and/or replace as required, close the TPSU
	• Verify water cooling pressure, repair and/or replace as required, read and record

RFPG water cooling pressure			
		<b>Pressure reading (bar):</b> 2.50	
• Switch on the RFPG and verify the functionali	ty of the RFPG fans, repai	r and/or replace as required, reinstall all	covers
• Open the DPSU, visually verify that no compo	onents are loose or appears	to be damged, repair and/or replace as	required
• Verify the voltage output in the DPSU, adjust,	repair and or replace as re	quired, read and record. Re-install the I	DPSU
DPSU voltage			
Parameter	Voltage	Ripple (peek to peek)	Voltage limits/ripple limit
+48V (V1):	47.81	1.34	47.5-48.5 VDC/200mV
• Verify SCU functionality for H-, adjust, repair	· ·		
H-, at the PSS magnet page: switch on the wate displayed on the measurement module/ the PSS	r cooling and the magnet,	set the magnet to the H- configured val	ue, read and record the OFF value a
H-, at the PSS RF page: Select STANDBY, afte on the measurement module/the PSS		be: STANDBY READY, read and reco	rd the STANDBY value as displaye
Verify VAC voltage and ripple at the load phase			
H-, at the PSS RF page: Select NORMAL, let th module/the PSS, in case of any significant change			isplayed on the measurement
When finished, download the statistics log, the ty C:\backup\scu.	wo milliseconds logs and th	ne five seconds log.Save the log files in	the backup folder in the service lapto
If there are any significant change in any value, repair and/or replace as required	investigate the reason. Pay	special attention to the analog in voltag	es, humidity and temperature, adjus
