Test of vacuum tightness on PSS

Plot vacuum pressure as function of gas flow from 1sccm to 10 sccm. Vacuum pressure vs gas pressure should be a linear relationship.

Gas flow setting: 5,0 +/- 1 sccm

Gas flow	Chamber vacuum pressure	Backing pressure	Max Chamber	Max Backing pressure (mbar)
Gas now	(mbar)	Dacking pressure	pressure (mbar)	Wax Dacking pressure (moar)
1	2.9E-6	0.012	3,60E-06	1,30E-02
2	12	32	6,10E-06	2,10E-02
3	12	0.220001	8,90E-06	2,70E-02
4	0.3001	2.11E-5	1,10E-05	3,30E-02
5	0.3201	0.0101	1,30E-05	3,90E-02
6	0.1002	101100	1,50E-05	4,50E-02
7	9.0E-6	13	1,60E-05	4,70E-02
8	1.321	9312.12	1,80E-05	5,40E-02
9	321.12	9.132	2,00E-05	5,90E-02
10	0.123	9.123	2,20E-05	6,50E-02
OK value	Too low value			

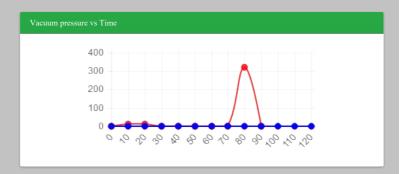

Pass critera: Linear relationship between vacuum pressure and gas flow. (Blue line should be below red line)

Vacuum leak test performed on PSS

With the vacuum system operating in pump mode with all BEV closed and without gas flow.

Set Vacuum system on VCU to Standby and observe the leak rate into the cavity (using pressure as proxy)

Time from Set Standby (sec)	Vacuum pressure (mbar)	Max leak rate
0	12	1,80E-07
10	0.123	1,00E-06
20	0.1	1,50E-06
30	1.231	1,90E-06
40	0	2,30E-06
50	0.132	2,70E-06
60	0	3,00E-06
70	1231	3,30E-06
80	1.12313	3,60E-06
90	132.123	3,90E-06
100	123	4,20E-06
110	132.01	4,60E-06
120	0	4,90E-06

Pass critera: Time to reach 1.0E-5 mbar > 10 s (Blue line should be below red line)

Vacuum	Switch on the water cooling to the diffusion pump
	Press STANDBY on the VCU, record time
	Standby time
	Actual standby start time: 10:27
	Verify that the green DP-lamp on the VCU lights up within 30min, re-adjust DP temp-switch as required
	DP-lamp activation time
	DP -lamp activated in (min): 0 Max 30min
	Press PUMP on the VCU and note the following values:

Pumping down			
Time before HVV opening	11	10-15 min	
Actual time for HVV opening:	0	<30s	
Actual time to reach 1.0*E-5	0		
• After reaching the vacuum value of 1.0*E-5 open the IS gas flow at 10sccm	for 15	minutes	

* 7								
Vacuum	WARNING! Diffusion pump may be very warm, verify that at least 2hrs has passed since pump shutdown.							
	WARNING! Rotary and/or diffusion pump oil may be radioactive, verify activity level by performing an activity survey!							
	NOTE! Verify that all cables are free from interference with the diffusion pump, interference may cause cab	le melting and/or electrical						
	shortcut							
	• Verify the oil level and the color of the rotary pump oil, re-fill or change as required, record re-filled or changed volum	e						
	Rotary pump oil level							
	Date of the last replacement of oil: 2022-11-07							
	Volume filled/changed (ml): 0							
	Maintenance of the diffusion pump: to be performed every 5 years							
	Last maintenance of the diffusion pump							
	Ventilate the diffusion pump by removing Pirani 1							
	NOTE! Verify that the water cooling is shut off before disconnection of the diffusion pump							
	• Remove the diffusion pump and drain the oil							
	NOTE! Measure the lenght of the Jet assy before it is disassembled. The lenght is critical to pump perform	nance.						
	• Disassemble and clean the diffusion pump							
	Replace the heater							
	Reassemble, reinstall and fill the diffusion pump with new oil							
	Diffusion pump oil replacement							
	Volume filled/changed (ml): 0							
	• Verify the condition of the rotary pump oil mist filter, clean, inspect or replace as required							
	• Verify the condition of the rotary pump oil mist filter O-ring, clean, inspect for damage and/or deformation, replace as	required						
	• Verify the functionality of the pirani gauges and the penning gauge, clean, inspect or replace as required

RFPG

WARNING! High voltage (up to +	7800V D	С).				
• Switch off the power to the RFPG						
• Open the TAU and verify that the grounding device is operational (completely in contact with the RF tube). Verify that no burn marks, loose cables or leaking water are present, clean, repair and/or replace as required, close the TAU						
• Open the GSPU and verify that no b	PU and verify that no burn marks or loose cables are present, clean, repair and/or replace as required, close the GSPU					
• Open the DPA and verify that no bu	rn marks,	marks, loose cables or leaking water are present, clean, repair and/or replace as required, close the DPA				
• Replace the RFPG air inlet filters, cl	G air inlet filters, clean the front grid cover, inspect the grid of the back of the cabinet, clean if required					
WARNING! High voltage (up to +7800V DC). It is important to discharge components before removal of rectifier diode/s.						
• Open the TPSU, verify TPSU diode status (48 diodes), diode bridge should read 0,8-0,9V forward voltage drop from negative (-) pin to positive (+) pin. A defective diode bridge will read close to/or 0V, repair and/or replace as required						
• Verify tightness of the TPSU termination	al screws 7	ГВL 1, TBL 2, TBL 3, tight	ten and/or replace as required, close th	eTPSU		
• Verify water cooling pressure, repair	r and/or re	place as required, read and	record			
RFPG water cooling pressure						
			Pressure reading (bar): 2.50			
• Switch on the RFPG and verify the f	unctionali	ty of the RFPG fans, repair	and/or replace as required, reinstall all	l covers		
• Open the DPSU, visually verify that	no compo	onents are loose or appears	to be damged, repair and/or replace as	required		
• Verify the voltage output in the DPS	U, adjust,	repair and or replace as req	uired, read and record. Re-install the	DPSU		
DPSU voltage						
Parameter Voltage Ripple (peek to peek) Voltage limits/ripple limit						
+48V (V1):		47.81	1.34	47.5-48.5 VDC/200mV		
Verify SCU functionality for H-, adjust, repair and/or replace as required, read and record						
H-, at the PSS magnet page: switch on the water cooling and the magnet, set the magnet to the H- configured value, read and record the OFF value as displayed on the measurement module/ the PSS						
H-, at the PSS RF page: Select STANDBY, after 1 minut RF state should be: STANDBY READY, read and record the STANDBY value as displayed on the measurement module/the PSS						
Verify VAC voltage and ripple at the load phase detector board						
H-, at the PSS RF page: Select NORM module/the PSS, in case of any signifi	· · · · · · · · · · · · · · · · · · ·			lisplayed on the measurement		
When finished, download the statistics C:\backup\scu.	log, the tv	vo milliseconds logs and the	e five seconds log.Save the log files in	the backup folder in the service laptop,		
If there are any significant change in a repair and/or replace as required	ny value, i	investigate the reason. Pay	special attention to the analog in voltag	ges, humidity and temperature, adjust,		
If there are any significant change in a repair and/or replace as required	If there are any significant change in any value, investigate the reason. Pay special attention to the analog in voltages, humidity and temperature, adjust,					
At the PSS RF page: Select STANDBY, RF shall change state to: STANDBY READY
